

The EXICloud remote monitoring system is an appropriate component of a modern guide and emergency luminaire design. The monitoring service makes it easy to keep track of maintenance needs, and monitor the state of luminaires installed in the property. The system stores data in a cloud environment.

- Quickly deployable cloud-based control system that requires no preliminary investments.
- Administration of the company's user privileges per site. Access to installation premises granted only to designated persons or groups.
- User interface on PC, tablet or smartphone. Easy on-site browsing of target views.
- Secure data transmission architecture between the centre and server.

**Product codes**

CODE	DESCRIPTION	ELECTRICAL NUMBER
EXIC-START	The EXICloud deployment package including an adapter modem, a power source (230V AC), external aerial with a 2.5 m cord, serial cable for connection to the centre, and the mounting box for the adapter modem.	4228651
